

Circles

Q.1 In the adjoining figure, O is the centre of the circle and $\angle AOC = 60^\circ$. Prove that $3\angle y - 2\angle x = 140^\circ$

Q2 In the adjoining figure, A, B, C and D are four points on a circle. AC and BD intersect at a point E. If $\angle BEC = 130^\circ$ and $\angle ECD = 20^\circ$, find $\angle BAC$

Q3 In the given figure, $\angle BAD = 65^\circ$, $\angle ABD = 70^\circ$ and $\angle BDC = 45^\circ$. (i) Prove that AC is a diameter of the circle. (ii) Find $\angle ACB$

Q4 In the adjoining figure, ED is a chord parallel to the diameter AC of the circle ABCDE. If $\angle CBE = 63^\circ$, calculate $\angle DEC$

Solution

Q5 In the adjoining figure, AD is a diameter of a circle with centre O. If AD is parallel to BC and $\angle CBD = 32^\circ$, find (i) $\angle OBD$ (ii) $\angle AOB$ (iii) $\angle BED$
